DECLARATION OF PROJECT WORK AND AI TOOL USAGE

Project Title: AUTOSAR HLD Document Analysis Assistant

Student Name: Ruchithra S
Register Number: 127003217
Department: Computer Science and Engineering
Institution: SASTRA Deemed University
Programme: Tata Techpulse

1. Declaration

I, Ruchithra S, hereby declare that the project titled **"AUTOSAR HLD Document Analysis Assistant"** has been developed and documented as part of my project work for the above-mentioned programme.

The project focuses on analysing AUTOSAR High-Level Design (HLD) documents using PDF processing, structured information extraction, retrieval-based question answering, architectural consistency checks, and retrieval evaluation.

2. AI Tool Usage Declaration

AI-assisted tools were used during the development process to support activities such as code generation or refinement, prompt development, debugging, documentation, and project review, where applicable.

The project incorporates evidence-grounded question answering, source-page references, rule-based consistency checks, and retrieval evaluation. The implementation and evaluation results are presented based on the project artefacts and tests available.

I acknowledge that AI-generated outputs may contain errors and that the use of AI tools does not, by itself, establish complete AUTOSAR standards compliance, functional safety certification, or the correctness of every generated answer.

I take responsibility for the information submitted, subject to the actual contributions, verification performed, and applicable programme requirements.

3. Acknowledgement of Tools

The tools and technologies used in the project include Python, Streamlit, PyMuPDF, Google Gemini, and other dependencies documented in the source code.

Additional AI-assisted tools used during development:

- **ChatGPT:** Used for project planning, structuring the development workflow, and preparing and refining prompts for implementation.
- **Claude AI:** Used to assist with debugging and troubleshooting selected code issues during development.
- **Google Antigravity:** Used as an AI-assisted development environment to support the implementation, building, and development of the project.

These tools were used to support different stages of the project development process. The final submission reflects the project implementation, available test results, and evaluation artefacts.

4. Confirmation

I confirm that the details provided in this declaration are accurate to the best of my knowledge and that any required institutional or programme-specific AI usage guidelines will be followed.
